Date:

Analyse various types of servers using webalizer tool.

AIM:

To analyze the performance and usage statistics of a web server using the webalizer log analysis tool.

Algorithm:

- Start the system and install the webalizer tool.
- obtain the web server access log file, such as Apache's access.log.
- configure webalizer with the location of the log file and the output directory.
- Run webalizer to process the web server log.
- Webalizer reads and analyzes and HTTP request records. It calculates statistics such as:
- Total visits, Number of requests, Number of pages, Number of files, Total data transferred, unique visitors, HTTP response codes, Most frequently accessed URLs, Browsers and operating systems used.
- Generate the HTML report.
- Open the generated report in a web browser.
- Analyze the statistics and determine the server usage and performance.
- Stop the program.

Procedure: Webalizer is a log-analysis tool, so the practical implementation consists of configuring and executing webalizer rather than writing a conventional program.

Step 1: Install / Linux:

Sudo apt update
Sudo apt install webalizer.

Step 2: Create webalizer Configuration
Create or edit the configuration file
Example configuration:

Log File /var/log/apache2/access.log
output Dir /var/www/html/webalizer
HostName localhost

dns_cache.db
Incremental yes
Page Type htm*
Page Type cgi
Page Type php

Sample output:

A typical webalizer report may display:

Summary by Month

Month	Visits	Pages	Files	Hits	KBytes
Jan 2026	1250	3420	5210	7345	45820
Feb 2026	1480	3913	5740	8120	52140
Mar 2026	1635	4250	6210	8950	58760
Total	4365	11585	1760	24415	156720

Page Type
Page Type asp
jsp

Step 3:. Run webalizer
Sudo webalizer -c /etc/webalizer/webalizer.conf
Step 4: View the Report
The generated report can be opened in a web browser:.
http://localhost/webalizer/
the report contains graphical and tubular information about web.

Top URLS:.
1) /index.html
2) /about.html
3) /products.html
4) /contact.html
5) /login.html.

Response codes:..

200	OK	21500
301	Moved permanently	1200
404	Not found	1200
500	Server Error	15

Result:
Thus, the webalizer tool was successfully used to analyze web server log files. The generated report provides useful information such as number of visitors, requests pages viewed, files accessed, bandwidth, and operating System which helps in evaluating web server usage and performance.
